

MSS-SRS International Spine Congress 2011
Theme: Challenges & Controversies in Spine Surgery
Date: 8th – 10th December 2011
Venue: Shangri-La Hotel , Kuala Lumpur, Malaysia.

This event brings together the top spine specialists in region and beyond. Numerous up-to-date lectures and case on the challenges and controversies in spine surgery is presented.

Best Contact (M) Sdn. Bhd participates in this event as exhibitor to introduce audiences with high-end mobile C-Arm, Ziehm especially on our latest flat panel detector with 3D function model, Ziehm Vision FD Vario 3D. This model combines excellent 2D-image quality with a highly efficient intraoperative 3D imaging module.

Intraoperative 3D imaging plays a vital role especially in bone surgery, for instance traumatology and orthopedic surgery, in neurosurgery as well as in oral and maxillofacial surgery.

Ziehm Vision FD (Flat detector) fully-digital, distortion-free image acquisition and processing technology raises accuracy and image quality to a previously unknown level, especially when combined with navigation systems or Computer-Assisted Surgery. The C-arm's intelligent and compact design together with its unmatched ease of use benefit both surgeons and operation staff.
